Overview

Municipal Boundaries contains the most current and accurate information on the boundaries of incorporated municipalities. Updated on a quarterly basis, Municipal Boundaries data guarantees continual accuracy.

In addition to boundary realignment, each update reflects new incorporations, annexations, de-annexations, mergers, consolidations, dis-incorporations or dissolution of local governmental entities. Whenever these changes occur, new maps are located from hundreds of local government resources and incorporated in the product. Over 1,000 records are updated each quarter.

Also included in this product are Census Designated Places, which are unincorporated areas represented by the U.S. Census Bureau. (Designated Places are used as a reference and are not updated.)

Database Elements

Municipal Boundaries is packaged with key database elements including:

- Place name
- State FIPS
- County FIPS
- Population
- Date of last annexation

- County name
- Area of municipality
- Centroid lat/long

Applications

Items, such as tax rates, public safety facilities, and city ordinances are tied to incorporated municipalities. For this reason and its frequent updates, Municipal Boundaries is ideal for the following applications:

- Asset tracking
- Determine which city ordinances are applicable
- Accurate assignment of insurance rates
- Target marketing campaigns
- Creation of sales territories and disbursement of compensation
- Tracking of customer service trends
- Accurate location identification for mobile phone usage
