

# StreetPro™ Netherlands

*MapInfo's Premium Street Product for  
The Netherlands – Offering the Latest in  
Street Data for Superior Mapping & Analysis*

StreetPro™ Netherlands is a 1:10 000 street-level vector map that gives you real-world display with the graphic quality you need to illustrate and present your business analysis. This product is ideally suited to a wide variety of mapping analysis, as well as the creation of quality maps for professional looking reports and presentations.

### Features

- StreetPro™ Netherlands contains 24 layers of information such as roads, from motorways to streets; parks and woodlands; railway lines; urban areas; Provincie and Gemeente boundaries; parking; water; and more
- Updated twice a year to ensure you have the most accurate and comprehensive mapping resource
- Available with peace of mind subscription pricing so you'll always have the most up-to-date data to work with
- Complete with MapInfo workspaces for faster and easier viewing and analysis

# Overview

*StreetPro™ Netherlands is MapInfo's premier street product designed for users who need up-to-date and accurate street detail for business analysis and for the creation of quality presentation maps. StreetPro™ Netherlands is available in two forms, with or without house number ranges:*

## StreetPro™

StreetPro™ provides the user with real life display mapping down to street level and contains street names.

## StreetPro™ with Addresses

StreetPro™ with Addresses includes all the same features as StreetPro™, with the added addition of house number ranges for selected areas.

This enables the user to conduct technical geocoding analysis for those areas containing house numbers, and is particularly important to business applications requiring a higher degree of accuracy.

StreetPro™ with Addresses is used in many business applications. An example is the telecommunications sector where it is extensively used for network planning as well as fibre optic cable installation and optimisation.

## Who should use StreetPro™?

StreetPro™ has been designed for MapInfo users who need a high level of precision and up-to-date street information for their mapping projects. StreetPro™ applications include site selection, market potential, geocoding, customer service, and network analysis.

## StreetPro™ layers

With StreetPro™ Netherlands features are presented within individual layers. These can be viewed individually, in any combination, or all together, depending on the needs of the individual user or application. Layers include:

### Land

Contains land area and coastlines.

### Water

Contains sea, lakes, rivers, canals and all major bodies of water.

### Land use

Contains city parks, national and regional parks and islands.

### Land cover

Contains beaches, dunes, sand, woodland, moorland and heathland.

### Urban

Contains built up areas.

### Administrative boundaries (2 layers)

Contains Provincie and Gemeente boundaries.

### Motorways & major roads (3 layers)

Contains motorways, major roads of high importance, other major roads and secondary roads.

### Streets (2 layers)

Contains connecting/local roads of major importance, local roads and destination roads.

## Ferry

Contains ferry routes.

## Railways

Contains railway lines.

## Business locations

A point file containing hotels, motels, restaurants, petrol stations, car dealers, car rentals and shopping centres.

## Parking

Contains parking areas, parking garages and rest areas.

## Public

Contains post offices, hospitals and government buildings.

## Frontier

Contains frontier crossings.

## Railway stations

A point file containing railway stations.

## Gazetteer (3 layers)

A point file of cities and towns divided into three layers based on population. The layers build on one another – the third layer combining all the points of the previous two layers with the addition of smaller settlements.

## Addresses

Only available in StreetPro™ with Addresses this contains the street and house number ranges for selected areas.

## Note

Airport and Recreational features are currently not available in StreetPro™ Netherlands. However, the layers have been created to maintain consistency with other StreetPro™ products for Europe and in anticipation of future data availability.

## Subscription pricing

StreetPro™ Netherlands can be purchased in one of two ways:

- A single one off purchase
- Or subscription pricing

Subscription is the most cost-effective way to purchase StreetPro™ Netherlands and it automatically guarantees you the very latest street data for your analysis and presentations.
